

HARIMURUGAVEL GNANAVEL

Senior Frontend Engineer · Angular & React · Full-Stack (Node.js)

Chennai, India · +91 86376 68586 · +91 78128 11213 (WhatsApp) · harigmindia7@gmail.com · [linkedin.com/in/harigm7](https://www.linkedin.com/in/harigm7) · github.com/harigm7

PROFESSIONAL SUMMARY

Senior Frontend Engineer with 8+ years designing frontend architecture and delivering scalable, production-grade SPAs across Angular (v16-v19) and React (v16-v18). Owned end-to-end frontend architecture for enterprise platforms including Unilever's multi-module commerce platform and Cerebro, an agentic AI simulator — defining module boundaries, state management strategy, real-time data layers, and CI/CD integration. Proven track record driving measurable outcomes: 22% bundle reduction, 99%+ payment success rate on 50K+ monthly orders, and market-research turnaround cut from weeks to 48 hours. Skilled in TypeScript, RxJS, NgRx, Redux Toolkit, performance optimization, and AI-assisted development workflows. Effective technical mentor and cross-functional collaborator in Agile/Scrum environments.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES2022+), HTML5, CSS3/SCSS, SQL
Frontend	Angular 16–19 (Signals, Standalone, Control Flow), React 16–18 (Hooks, Suspense, Concurrent), Angular Material, Tailwind CSS, Bootstrap
State Mgmt	NgRx, RxJS (Operators, Subjects, Schedulers), Redux Toolkit, React Context API
Real-Time	WebSockets, Socket.IO, Server-Sent Events (SSE), EventSource API
Backend / APIs	Node.js, Express.js, REST APIs, MongoDB, JWT, OAuth 2.0, OpenAI / Azure OpenAI APIs
Auth / Payments	MSAL, Azure Active Directory, Azure AD SSO, Razorpay (UPI, cards, net-banking)
Data Viz	D3.js, Chart.js, Apache Superset (custom plugins)
Cloud / DevOps	Microsoft Azure, Azure Functions, Azure DevOps CI/CD, Docker, Terraform, Git, Vercel
Testing	Jest, Karma, Jasmine, Unit Testing, Integration Testing
AI & Tooling	Claude (Anthropic), GitHub Copilot, ChatGPT, Prompt Engineering, VS Code, Postman, EmailJS
Methodologies	Agile, Scrum, TDD, Code Reviews, Frontend Architecture, Micro-Frontends, Component-Driven Development, Feature-Based Module Design, SDLC
Mobile	Swift, iOS (UIKit, AVFoundation, background audio), WebSockets on mobile

PROFESSIONAL EXPERIENCE

Specialist — Product Engineering (SDE-II Equivalent) · LTIMindtree

Jan 2023 – Present

Cerebro — Agentic AI Focus Group Simulator Angular 17+, TypeScript, RxJS, NgRx, Socket.IO, WebSockets, SSE, D3.js, Docker, Azure Functions

- Owned the end-to-end frontend architecture for an agentic AI platform simulating autonomous AI-persona focus groups — defined the module structure, real-time data layer, state management strategy, and Azure deployment topology from the ground up, compressing market research turnaround from several weeks to under 48 hours.
- Made the architectural decision to separate bidirectional communication (Socket.IO/WebSockets) from one-way LLM token streaming (SSE), keeping concerns isolated and enabling independent scaling of each channel — handling 10+ concurrent AI personas per session without UI degradation.
- Engineered socket lifecycle management with auto-reconnect (exponential backoff), heartbeat/ping handling, and room-based namespacing — achieving stable long-lived connections under sustained load.
- Reduced UI re-render overhead by ~60% applying RxJS operators (switchMap, scan, bufferTime) with OnPush change detection to throttle high-frequency socket events.

- ▶ Built D3.js dashboards for per-persona sentiment analysis, keyword clustering, and discussion timelines with drill-down — adopted by 5+ internal research teams.
- ▶ Containerized the Angular app with Docker and integrated Azure Functions over secure WebSocket and REST channels, enabling single-command deployment across 3 Azure environments.

Unilever — Enterprise Commerce Platform *Angular 16–19, TypeScript, RxJS, NgRx, MSAL, Razorpay, Google Maps API, Chart.js, Tailwind CSS*

- ▶ Defined the frontend architecture for a 12-module enterprise commerce platform — established feature-based NgRx store structure, lazy-loaded routing strategy, shared component library boundaries, and typed HTTP interceptor layer used as the standard across all teams.
- ▶ Led Angular migration from v16 → v19, making the architectural call to adopt Signals for local UI state and retain NgRx for cross-module shared state — reducing bundle size by **~22%** and raising Lighthouse performance score from 68 to 91.
- ▶ Integrated MSAL with Azure Active Directory for enterprise SSO, including role-based route guards, silent token refresh, and typed HTTP interceptors — eliminating 25+ weekly helpdesk login tickets.
- ▶ Built a Razorpay checkout supporting UPI, cards, and net-banking with webhook-driven order reconciliation, achieving **99%+** payment success rate across **50K+** monthly orders.
- ▶ Designed a delivery management module with serviceability checks, slot selection, and dynamic routing across standard, express, and store-pickup options integrated with 4 logistics partners.
- ▶ Integrated Google Maps API for address autocomplete, geocoding, and live delivery tracking — improving address accuracy by **~35%** and reducing failed deliveries by **~20%**.
- ▶ Shipped reusable Chart.js sales and operations dashboards adopted by 5+ downstream product teams.

UIBuilder — Low-Code Drag-and-Drop Website Creator *Angular, TypeScript, RxJS, NgRx*

- ▶ Architected a low-code platform from scratch — designed the component-tree data model, canvas rendering strategy, and NgRx state shape to support deep undo/redo history and conflict-free multi-user editing without re-architecting as scope grew.
- ▶ Engineered a visual drag-and-drop canvas with 50+ reusable components and live preview in Angular — enabling non-technical users to ship websites in under 1 hour vs. the previous 3-day developer-led cycle.
- ▶ Cut canvas re-render time by **~45%** via memoized NgRx selectors and OnPush change detection across thousands of nested component nodes.

SSV — Data Exploration & Visualization Platform *React, Redux Toolkit, TypeScript, Apache Superset*

- ▶ Extended Apache Superset with custom React components and visualization plugins, expanding chart variety by **~40%** and onboarding 8+ internal teams previously locked into legacy BI tools.
- ▶ Implemented role-based dashboard sharing, integrated 6+ data sources, and replaced 2 legacy BI licenses — saving an estimated **\$30K** annually.
- ▶ Built a typed Redux Toolkit state layer that reduced Superset frontend bug reports by **~30%** in the first quarter post-release.

Cross-Cutting Contributions

- ▶ Mentored 4–5 junior frontend engineers through structured code reviews and pair programming sessions; 2 promoted to mid-level within 12 months.
- ▶ Established AI-assisted development workflows (Claude, GitHub Copilot, ChatGPT) reducing scaffolding and boilerplate time by **~30%** and standardizing prompt patterns across the frontend team.
- ▶ Drove frontend platform initiatives including shared component libraries, typed HTTP layers with interceptors, and feature-based NgRx store architecture.

Application Developer (SDE-I) · Vthink Global Technologies

Feb 2017 – Dec 2022

Jamba Juice — E-Commerce Storefront (US Client) *Angular, Node.js, Express.js, REST APIs, Payment Integration*

- ▶ Built the end-to-end customer-facing storefront and order flow for Jamba Juice, a US quick-service restaurant chain, handling **5K+** daily transactions across 500+ store locations.
- ▶ Cut average page load time from 4.2s → 1.8s using lazy loading, route-level code splitting, and image optimization — improving Core Web Vitals across all major pages.
- ▶ Reduced cart abandonment by **~18%** by redesigning the checkout flow with async validation, inline error recovery, and persisted cart state across sessions.
- ▶ Integrated third-party payment and loyalty APIs; wrote Node.js/Express.js middleware to normalize order payloads across multiple POS integrations.

Ovenues — Event & Venue Booking Marketplace *Angular, Node.js, Express.js, MongoDB*

- ▶ Delivered a full-stack event marketplace covering venue search, real-time availability calendar, vendor onboarding portal, and end-to-end payment flows — 100+ vendors onboarded in the first quarter post-launch.
- ▶ Built a reusable Angular reactive-form framework with dynamic field configuration, reducing new-form delivery time from 3 days to 4 hours across the product team.
- ▶ Designed the MongoDB schema for vendor listings, bookings, and availability slots with indexing strategies that kept search queries under **120ms** at scale.

ClanHQ — Mobile Chat App for Gamers *Swift, iOS, WebSockets, AVFoundation, Real-Time Voice*

- ▶ Co-developed an iOS chat application in Swift featuring persistent voice channels, background-friendly audio using AVFoundation, and real-time messaging over WebSockets — reaching **10K+** peak active users.
- ▶ Implemented push notification handling and foreground/background state transitions to keep users connected during active gaming sessions without excessive battery drain.

BrandMuscle — Subscription-Based Advertising Platform *Angular, Node.js, Express.js*

- ▶ Built a location-targeted advertising subscription platform with plan-selection, promo-code application, and automated renewal billing flows that lifted renewal conversion by **~25%**.
- ▶ Developed an Angular admin dashboard for campaign managers to track impressions, clicks, and subscription status across regions in real time.

FREELANCE & PERSONAL PROJECTS

FTPL Field Intelligence Platform [Live] *Angular, Firebase, Firestore · ftpl-field-intelligence-be6b0.web.app*

- ▶ Built a multi-section field data collection PWA for Fangs Technology Pvt Ltd (Tamil Nadu) used by field sales reps to capture store-level intelligence across 8 structured sections — store identity, personnel, competitor data, demo units, and retail assets.
- ▶ Implemented auto-populate logic that fills all store master fields from a single store code entry, with Firestore as the backend — reducing data-entry time per store visit by over **60%**.

Aadhava Constructions — Real Estate Website [Live] *React, EmailJS, Vercel · aadhava-constructions.vercel.app*

- ▶ Designed and shipped a production real estate marketing website for Aadhava Constructions with project gallery, enquiry forms, and EmailJS-powered lead capture — deployed to Vercel with CI/CD.

Ateendra Developers — Real Estate Website [Live] *Angular, Vercel, Custom Domain · ateendra.in*

- ▶ Built and deployed a full Angular real estate website on a custom domain (ateendra.in) with SEO setup (Google Search Console, sitemap, robots.txt), Angular routing fixes, and Vercel DNS configuration.

Personal Portfolio [GitHub] *React, Vite, EmailJS · github.com/Hari1879/HariPortfolio*

- ▶ Developed a personal portfolio site in React + Vite with EmailJS-powered contact form, deployed as a static site. Demonstrates hands-on experience with modern React tooling and third-party API integration.

EDUCATION

B.E. — Electronics and Communication Engineering

2012 – 2016

Kalaivani College of Technology · Chennai, India
